Perpetual-Futures Trend · Strategy Whitepaper

I THE ENGINE · WHAT RUNS EVERY 2 HOURS

- 1 read the exchange -> account value, positions (entryPx), open orders
- 2 RISK FIRST -> every position carries native reduce-only TP/SL triggers
- 3 scan liquid perps (24h volume $\geq$ \$2M, 48h range $\geq$ 2%)
- 4 clean up-trend (Kaufman ER $\geq$ 0.35) breaking its trimmed 48h high (top 3 dropped)
- 5 go long: IOC limit = high + 1x ATR(21) · 5% of account · max 11 buys/day
- 6 daily heartbeat 22:00 UTC · ping on trades

II ONE TRADE · LIFECYCLE

armed at the trimmed high -> breakout fills (limit +1x ATR) -> long with native bracket -> TP

III PARAMETERS

universe	all Hyperliquid perpetual futures · ~230 coins
liquidity	24h notional volume $\geq$ \$2M
volatility	48h high-low range $\geq$ 2% of price
